

MyDataPortability Tool - Browser extension

This repository is a part of the master's thesis *"User-driven data portability - A user-driven data portability approach utilizing web scraping techniques to liberate data"*

This directory contains a React app (bootstrapped with Create React App).

The tool is published to the public and is available [here](#).

Getting started with the extension

Inside the project, run one of the following commands

```
yarn install then yarn start
```

This runs the browser extension in development mode. You will see a /dev folder has been created in your project with the extension.

To view the extension in your browser, open up firefox and load-temporary extension. (Choose the manifest file from "/dev" folder).

Prerequisites

[Node.js](#) and [Yarn](#)
